

## About Us

Open Valley Consulting Corp. is a technology consulting company. We are a small firm of computer professionals who have broad technological experience in a wide range of industries. Our members have worked in the Computer, Financial, & Medical industries since the late seventies.

During our years as computer professionals, we have worked with minicomputer manufacturers, teaching hospitals, medical institutions, financial institutions, and security companies. We have helped businesses in these various industries set up systems ranging from the original Sperry Univac to Sun Enterprise servers, Linux and BSD servers, Microsoft Windows machines, and HP/UX computers.

This breadth of business experience combined with our computing expertise allows us to find the computing solutions that our clients need.

## Open Valley Consulting Corp

**A consulting company that strives  
to meet your needs not ours.**

## *Our Mission*

Our mission is to implement technologies that make our clients' businesses simpler.

In so doing, we emphasize three core values: polite and efficient service, rapid return on investment and solutions that work. We use several strategies in order to accomplish this mission. We work with our clients to streamline and aggregate their computer systems and services, and we develop new systems in as straightforward and cost effective a way as possible. We also train our clients how to utilize their computer systems more productively.

As we work with our clients, they are better equipped and better prepared to use their computing assets to manage their business instead of spending their time managing their computers.

## *Accomplishments*

- Designed and implemented a satellite news delivery system for a NYC Brokerage
- Wrote custom Linux to IBM MQ Interface system for online trading environment
- Built Wifi networks with custom built Linux based access points and portals.
- Designed and installed a Linux based Email server with a web interface servicing over 2800 users.
- Designed a Linux Based Internet Kiosk system serving a busy college cafeteria and lounge
- Wrote a custom print server, which provides integrated print services from a network of serial, parallel, and tcp/ip printers.
- Implemented Linux Terminal Server Project thin client based computing labs.
- Integrated real time data acquisition hardware and software into LTSP classroom environment
- Taught Linux System Administration classes to IT professionals
- Designed and built many PIC & 8051 Microcontroller Projects
- And so much more, but imagine what we could do for you.

## *What We Provide*

OVC provides systems support and custom software and hardware solutions. We also work with our customers to establish computing procedures and train the appropriate staff. In addition, we can provide back up support when your staff are on vacation or in the event of a personnel change.
