

Why Offer Access

- Doctor's Office:
 - How long do patients wait to be seen by you?
 - How many patients put off seeing you because they are too busy?
 - If these patients can be productive while in your waiting room, they will see you more often.
- Car Dealership, Service Center, Car Wash:
 - How long does your average customer wait for their vehicle to be completed? In today's busy world, even 15 minutes can make a difference. If a potential customer realizes they can check email or do research while waiting, you will get more customers.
- Restaurants:
 - Once you become known to supply free internet access, your popularity will grow.
 - More customers will stay longer, ordering more, and encourage their friends to join them.
- Gyms:
 - Enable your customers to check their email while at the gym-- improving their productivity.
- Hotels:
 - Every hotel has free breakfast, free cable, free local phone calls. Stand out with Free Wi-Fi.
- Offering Wi-Fi access will:
 - make you stand out from the crowd.
 - draw additional customers
 - increase customer loyalty
 - improve customer satisfaction

Open Valley Consulting Corp

Accessibility is the key !

Open Portals

Unlike others who offer a simple "open" access point, our system consists of a custom access point with personalized portal software that redirects all first time users to a web page which has your personal business info and /or local advertising.

The Portals web page can be used to convey information about your office and let clients know why you are providing WiFi service. If desired, the portal can be configured to re-display the information page at one-half to one hour intervals (the default is once per day per user).

The portal software used contains a commercial grade firewall and a bandwidth limiter. This feature guarantees that customers using WiFi will not impact your business by using all your available internet bandwidth.

The operating system used is based on Debian Linux along with other open source products. This means no licensing issues or recurring yearly license fees and an extremely stable platform.

Kiosk Pictures

Kiosk's

We can also provide a stand alone Kiosk using a Linux operating system. It can be used to provide Web Browsing and Internet Messaging to people who do not have a Wifi enabled laptop. When not in use the Kiosk's screen saver can be configured to display a slide show of local information and/or advertising. This is a great way to keep your customers up to date.
